Figure S3. Asymptotic non-linear least squares regression of the proportion of germinated spores measured by counting vs. flow cytometry. Asymptote = 0.891 (standard error = 0.086, \( p = 1.46 \times 10^{-14} \)), y-intercept = 0.333 (standard error = 0.0247, \( p < 2 \times 10^{-16} \)), log of rate constant = 0.786 (standard error = 0.353, \( p = 0.0301 \)).
